2 Role Overview

2.1 What will you do

This role offers the opportunity to leverage strong technical foundations while developing deep expertise in survey-based analytics and decision-oriented insights.

We are seeking exceptional candidates with knowledge and passion to fill an Jr. Analyst/Analyst position in the Survey Operations & Analytics (SOA) team at BCG. This team is part of the Center for Customer Insights team and aligned to Global Advantage Practice Area. The team is an integral part of BCG's strategy to deliver superior value and sustained impact to clients.

SOA specializes in supporting BCG case teams on client projects that include generating insights from primary research data (surveys). The team has capabilities that enable it to engage across all elements of the primary research value chain with both BCG case teams as well as external service providers. Special emphasis is placed on the application of advanced analytics to survey data, providing key outputs that drive critical business insights. Additionally, the team leverages the latest tech. innovation to build models, simulations, and visualizations to maximize usability and impact of these analytics outputs.

At SOA, you will be joining a highly innovative team with an entrepreneurial mindset. You will be working directly with BCG's core consulting business in a highly dynamic and fast-paced environment. In addition to bringing your own unique skills and capabilities to the table; you will be expected to leverage opportunities to learn and grow intellectually through formal and on-job training.

3 You are good at

3.1. Web Application Development (Full stack)

- End to End web-development experience including architecting, design, planning, development and deployment
- Maintains a strong knowledge base of new opensource tech stacks, applications, techniques, and skills
- Strong problem-solving and follow-up skills; must be proactive and takes initiative
- Create robust proprietary code and translate business logic into project requirements
- Develop code using development best practices, and an emphasis on security best practices
- Provide system design recommendations based on technical requirements
- Work independently on development tasks with minimal supervision

3.2. Business requirement gathering and collaboration

- Demonstrated experience owning a production application end-to-end - from understanding existing architecture to shipping enhancements and ensuring uptime at scale
- Comfortable navigating code in inherited systems - reading undocumented code, reverse-engineering logic
- Owning all or part of a software development engagement and integrating with cross-functional teams
- Executing software development approach and creating defined outcome; contributing to approach selection
- Ensure proper sign-off before uploading materials into internal repository for reference; sanitizing confidential client content in marketing documents
- Contributes to team's content & IP development
- Imparts technical trainings to other team members in SOA, as and when needed

3.3. Problem solving

- You should be strong in solutioning with hands-on experience in software delivery, through the entire life cycle of software development.
- Strong problem-solving skills with the ability to develop and codify knowledge and provide appropriate technical advice where required
- Ability to onboard quickly onto existing codebases, understand architectural decisions without breaking production stability.

4 Technical Skills

4.1. Must Haves

- Experience in building high-performance web applications using - Python (Django/Flask/FastApi), React, Angular (HTML5 and CSS3), TypeScript
- Solid working knowledge of SQL and relational databases (MySQL, Microsoft SQL Server, SQL-Postgres, etc.)
- Knowledge of UI component libraries to produce high-quality designs following a high-fidelity specification
- Unix command-line tools and code repo Git
- CI/CD, DevOps tools
- Cloud infra architecture design (Azure, GCP, Oracle) and deployment using Kubernetes

- Exposure to charting libraries (HighCharts, Recharts, etc.) and basic wireframing skills (Figma, etc.)
- Cloud object storage (AWS S3, Data lakes, etc.)
- Version Control (Git/Github/Git Lab)
- Good to have knowledge of NoSql Databases like MongoDB

4.2. Good to have Skills

- Familiarity with ML platforms or AutoML solutions (e.g., Azure ML, SageMaker) is a plus
- Exposure to Generative AI and large language models, including prompt engineering or experimentation with tools such as OpenAI or Claude.
- Experience with automation, data pipelines, or AI workflow orchestration tools (e.g., n8n, Airflow, Prefect).
- Experience applying core analytical and machine learning techniques such as regression, classification, clustering, and exploratory data analysis for practical data analysis and business problem-solving.
- Exposure to tools such as R, SPSS, Alteryx, or VBA is beneficial; candidates will receive on-the-job training as required.
- Experience with data visualization and analysis tools (e.g., Tableau, Power BI, or similar) is an advantage.
- Working with large data sets, identifying opportunities for automation and application of AI to improve, enhance or transform processes. Interpreting data and building analytical outputs/reports using tools such as Excel, PowerPoint and other associated tools
- Collaborating effectively with global, cross-functional teams and external partners in fast-paced, ambiguous environments.

5 Analytical Mindset & Communication

- Open to working with survey and behavioral data, and willingness to learn survey design, weighting methodologies, and advanced survey analytics.
- Strong interpersonal skills; collaborative team player with a high standard of professionalism and service excellence.
- Excellent written and verbal communication skills in English, with the ability to explain complex analyses and technical details to non-technical stakeholders.

6 You Bring (Qualifications & Experience)

6.1. Education

- Bachelor's / Master's degree in computer science engineering/technology or equivalent; with demonstrated high academic achievement.

6.2. Experience & Technical Skills

- At least 2-3 years of end-to-end web – application/tool development experience in a commercial setup specifically services or consulting organization

Please note this position is not restricted solely to the responsibilities listed above and that the job scope and responsibilities are subject to change.

7 You'll work with

Colleagues in the Survey Operations & Analytics team who engage with BCG consultants and topic experts for efficient survey execution and analytics of survey data. Your work will support data-driven consumer insights, driving strategic decisions for our clients.

8 Who we are

BCG pioneered strategy consulting more than 50 years ago, and we continue to innovate and redefine the industry. We offer multiple career paths for the world's best talent to have a real impact on business and society. As part of our team, you will benefit from the breadth and diversity of what we are doing today and where we are headed next. We count on your authenticity, exceptional work, and strong integrity. In return we are committed to supporting you in discovering the most fulfilling career journey possible—and unlocking your potential to advance the world

9 Equal Opportunity

Diversity, Equity and Inclusion is a core BCG value, and we strive for a diverse and inclusive workplace where everyone has equal opportunities to flourish and progress in their career.
